WHAT IT SOLVES

VA contrast without VA slowness

Fast VA panel
3000:1 contrast with 1 ms response: what used to force a choice between one and the other.

119% of sRGB
It goes beyond the standard colour space and reaches 90% of DCI-P3 and of Adobe RGB.

200 Hz on both inputs
HDMI 2.1 and DisplayPort 1.4 deliver the same refresh rate: no need to pick the right cable.

Three video inputs
Two HDMI 2.1 and one DisplayPort 1.4: PC and console connected at once, both at 200 Hz.

What Fast VA is: VA panels always had the best contrast —deep blacks— but responded slowly, which is why TN or IPS were preferred for gaming. Fast VA solves that contradiction: it keeps 3000:1 contrast and brings response down to 1 ms. VA blacks with competitive-panel speed, without choosing between one and the other.

WHERE IT DELIVERS
