WHAT IT SOLVES

TV size with monitor sharpness

31.5 inches in QHD
2560 x 1440 keeps the image sharp on a screen where Full HD would already look grainy.

1800R curved VA panel
3000:1 contrast with 300 nits and HDR: deep blacks and a tight curve for a screen this size.

RGB on the cover
Rear lighting that bounces off the wall and softens the contrast with the room.

Both cables included
Comes with an HDMI cable and a DisplayPort cable: full refresh rate from day one.

QHD at 31.5 inches: sharpness is not set by resolution alone, but by how many pixels fit in each inch. On a 32-inch screen, Full HD stays at about 70 pixels per inch and edges start to show; QHD rises to about 93 and the image stays sharp. When the size grows, the resolution has to grow with it.

WHERE IT DELIVERS

Built for those who want a big screen on the desk

BIG-SCREEN GAMING
